EDUCATION

University of Sydney

Sydney, Australia

Candidate for M.S.(Hons) Computer Science – Specialization in Software Engineering

August 2026 – Present

- Clubs and Societies: SUAMS, USYD Athletics Club.
- Sydney International Student Award recipient.

Sunway University & Lancaster University

Malaysia / United Kingdom

Candidate for B.S.(Hons) Computer Science

Jan 2022 – Jan 2025

- Designed and developed robotics projects: quadruped robotic dog, autonomous mobile robot, and combat robot for competitive university challenges.
- Completed coursework in Artificial Intelligence, Computer Vision, Computational Intelligence, and Distributed Systems.
- Build an autonomous quadrupedal robot from scratch, from the design of the body parts, wiring of the electronics to ensure sufficient amps, and programming, all using 3D printed materials, 12x 90kgcm servo motors, a depth camera, lidar, jetson nano, programming using python and ROS, running on Ubuntu 20.04.

Sunway College

Kuala Lumpur, Malaysia

Sunway Foundation in Arts Programme

Jan 2021 – Jan 2022

- Completed foundational coursework in Business, Computer Science, and Microeconomics.
- Active member of Sunway Futsal Club, Athletics Club, and Tech Club.

EXPERIENCE

Ant International

Tun Razak Exchange, Kuala Lumpur, Malaysia

Backend Java Engineer

May 2025 – February 2026

Java · Python · Microservices · REST APIs (JSON) · Event-Driven Architecture · Message Brokers · PostgreSQL · AWS · Chargeback Automation

- Integrated chargeback case-management APIs into the risk platform, improving abnormal case handling efficiency by 15%.
- Built automated risk reporting and alerting workflows to monitor VAMP/ECP thresholds, preventing SLA breaches and enabling proactive interventions.
- Developed anomaly detection pipelines across dispute materials, chargeback patterns, and reconciliation issues, reducing escalations.
- Provided on-call incident resolution and root cause analysis across cross-service failures to prevent customer impact.
- Gained end-to-end expertise in chargeback flows, pre-arbitration, arbitration, and reconciliation using event-driven logic in live case management.

LogiFlow Automation

Shah Alam, Malaysia

Mechatronics Engineer (Software Specialized)

Jan 2025 – Mar 2025

- Applied the Geek+ API (HTTP POST/JSON) for warehouse automation tasks involving AMR coordination.
- Produced technical documentation and integration guidelines for system troubleshooting and onboarding.
- Supported automation system testing with a focus on data-driven optimization of sensor-based workflows.

PROJECTS

AI-Powered Payment & Chargeback System

Jan 2026 – Present

Java · Spring Boot · Python · PostgreSQL · Redis · React · Stripe APIs · JWT · Event-Driven Architecture

- Architected a distributed payment platform supporting wallet top-ups, QR payments, refunds, disputes, chargebacks, merchant revenue tracking, and real-time fraud monitoring.
- Designed a reliable payment pipeline from intent creation to ledger settlement using idempotent APIs, Redis distributed locks, and transactional balance updates.
- Integrated Stripe PaymentIntents and webhooks with end-to-end idempotency propagation, retry handling, and dead-letter queues to safely recover failed events.
- Built a double-entry ledger and immutable event log for financial auditability, reconciliation, balance consistency, and chargeback investigation.
- Developed a real-time fraud detection engine using transaction velocity, behavioral signals, and rule-based anomaly detection to block or challenge suspicious payments.
- Implemented a multi-agent AI orchestration layer (plan-and-execute pattern) routing requests across payment, account, merchant, and risk services.

COMPETITIONS

USYD HouseHackathon

Software Engineer

May 2026 – May 2026

- An overnight hackathon in a house, developed Gatekeep, an RAG driven platform to scrape and identify clothing stores near the user's location based on a specific request or prompt
- Implements geolocation calculation to estimate and rank the best locations based on user preferences and requests.
- Shipped it within a night, got user feedback and reiterated back into the product, reaching over 50+ interactions.

ROBOCON

Software Engineer

Kuala Lumpur, Malaysia

Aug 2023 – June 2024

- Developed a robot capable of real-time event-driven navigation, integrating ROS and depth cameras to respond dynamically to environmental changes.
- Programmed sensor fusion, joint control, and autonomous pathfinding in Python and ROS.
- Applied event-driven decision-making under strict real-time constraints in the competitive robotics arena.

LEADERSHIP

Head of Event Management, Sunway Robotics Club

Aug 2024 – Jan 2025

- Organized workshops (Arduino 1.0/2.0, 3D Printing) and coordinated technical talks for the university robotics community.
- Developed a sustainable documentation guide outlining event management procedures for future organizers.
- Led cross-functional teams across Project Development and Event Management to deliver workshops and events.

Student Ambassador, Sunway University Open Day

- Showcased the Quadruped Robot and Combat Robot to visiting students, teachers, and industry professionals, explaining design, engineering process, and real-world applications.

Volunteer, Sunway XFarms

- Assisted with smart farm operations (germination, harvesting, planting); collaborated with a diverse team to support daily maintenance and operations.

RELEVANT SKILLS

Languages	Java, Python, JavaScript, Arduino
Frameworks	Spring Boot, FastAPI, React, ROS, TensorFlow, Scikit-Learn
Infrastructure microservices	PostgreSQL, Redis, AWS (EC2, RDS), Docker, Kafka / message brokers, distributed
Domains robotics	Chargeback automation, risk management, anomaly detection, computer vision, deep learning,
CAD & Tools	Fusion 360, SolidWorks, Autodesk, Jetson Nano, OpenCR

HONORS AND ACHIEVEMENTS

USYD Sydney International Student Award ❖ IBM Data Science Professional Certificate – Coursera (Feb 2025)

INTERESTS AND ACTIVITIES

Robotics & Autonomous Systems ❖ Machine Learning & AI ❖ Competitive Programming ❖ Futsal & Athletics ❖ Smart Farming & Sustainability ❖ Athletics, Triathlon
